Education

KL University — Vijayawada, India
B.Tech in Artificial Intelligence and Data Science; CGPA: 9.2/10 — *Apr. 2026*

Vignan Co-operative Junior College — Guntur, India
Intermediate, MPC; Percentage: 92.9% — *Jun. 2022*

St. Joseph's High School — Narasaraopet, India
Secondary School, BSEAP; Percentage: 95% — *Feb. 2020*

Experience

Ascendsoft — Feb 2026 – June 2026
Intern | Remote

- Worked on Trading AI, an application project, contributing to both ML model training and backend development.
- Trained and fine-tuned an ML model using historical trading data to improve prediction/performance outcomes.
- Built and maintained backend APIs using FastAPI and PostgreSQL (with SQLAlchemy) to support the application's data flow.
- Identified and fixed bugs in the codebase, using AI coding agents to speed up debugging and resolution.

Nushift — June 2026 – Present
Intern | On Site

- Solo-designed and built **MedSpaces**, a full-stack healthcare marketplace platform connecting doctors with clinics/hospitals for consultation space bookings, including RBAC-based dashboards, verification, and listing approval workflows.
- Solo-built **Mill2Meal**, a production-ready D2C grocery e-commerce platform covering product discovery, checkout, subscriptions, order tracking, and Razorpay payment integration.
- Built both platforms using Next.js, React, Tailwind CSS, NestJS/FastAPI, Prisma ORM, and PostgreSQL, deployed on Vercel.
- Used AI coding agents to accelerate full-stack development, enabling rapid solo delivery of two production-grade applications.

Skills

Programming Languages: Python, TypeScript, JavaScript, Sql, C
Frontend : React.js, Next.js, Html, Css, Tailwind Css
Backend : Next.js, Node.js, Rest API Development
Database : PostqreSql
Ai & Integrations : Gemini Antigravity, Claude code, Ai prompt Engineering, Ollama
Tools & Platforms : Git, Github, Docker, Render, Vercel
Machine Learning & AI: Supervised/Unsupervised Learning, Scikit-learn, pandas, NumPy
Deep Learning: Basic Neural Networks, TensorFlow
Professional Skills: Team Collaboration, Leadership, Analytical Skills, Problem-Solving

Projects

MedSpaces — Healthcare Space Marketplace Platform

- Solo-designed and built a full-stack healthcare marketplace connecting doctors with clinics/hospitals for consultation space bookings, from architecture to deployment.
- Implemented role-based access control (RBAC) with separate authenticated flows for doctors, clinics, and admins, including verification and listing approval workflows.
- Built the platform using Next.js, React, Tailwind CSS, Prisma ORM, and PostgreSQL (Neon), deployed on Vercel with email integration via Resend.
- Used AI coding agents to accelerate development across frontend, backend, and database layers, enabling rapid solo delivery of a production-ready platform.
- Medspcae (Live Url)

Mill2Meal — D2C Grocery E-commerce Platform

- Solo-built a production-ready grocery e-commerce platform covering product discovery, cart, checkout, OTP auth, subscriptions, and order tracking.
- Developed secure REST APIs (NestJS) with JWT auth, RBAC, and full order lifecycle management, integrated with Razorpay for payments.
- Implemented inventory management, stock reservation, and pincode-based delivery serviceability logic.
- Built using NestJS, PostgreSQL, Prisma, React/Next.js, and Tailwind CSS; used AI agents throughout to move fast without sacrificing code quality.
- MillToMeal - Customer Application (Live Url)

Zero Noise CEO OS — AI-Powered Founder Performance Platform

- Solo-built a production-ready AI-powered founder performance platform featuring daily planning, deep work tracking, capability scoring, goal management, AI coaching, and weekly/monthly performance reviews.
- Designed and developed scalable REST APIs using NestJS, JWT authentication, Prisma ORM, and PostgreSQL, implementing secure user management, activity tracking, goal lifecycle management, and performance analytics.

- Built a modern, responsive Next.js dashboard with React, Tailwind CSS, TanStack Query, and React Hook Form, integrating AI-driven insights powered by the Google Gemini API.
- Implemented end-to-end architecture using NestJS, PostgreSQL, Prisma, Supabase, Next.js, TypeScript, and Tailwind CSS, following a modular, scalable design with automated API documentation and AI-assisted development workflows.
- ZeroNoise (Live Url)

Achievements

Best National Service Scheme Volunteer | KL University 2024-2025

Certifications

Salesforce Certified AI Associate | Salesforce 2024

Python IBM Certified | IBM 2023

Research Papers

Implementation of Machine Learning Techniques for Cloud Job Cost Prediction | In Progress Aug. 2025 – Present

Leadership & Professional Engagement

ARISE Student Body, KL University Nov. 2024 – May 2025

Vice President

- Supported student needs and academic initiatives by coordinating activities and addressing concerns effectively.
- Managed student grievances, projects, and society events to ensure smooth academic and extracurricular operations.
- Collaborated with faculty and student teams to maintain continuity and promote positive student-focused initiatives.

National Service Scheme(NSS) of India, KL University Dec. 2023 – Oct. 2024

Student Coordinator, Unit-12

- Organized and participated in 30+ NSS awareness programs focused on social and community issues.
- Led donation drives to collect food and clothes for flood-affected orphans and underprivileged communities.
- Demonstrated leadership, teamwork, and social responsibility through active community service initiatives.
